

FAT BASKET Folding Cargo Carrier

ITEM: 80972
Page 1 of 1

Instructions on how to install the folding basket on the cycling rack:

- 1) Lift the locking tab/hook at the top of the basket. (This is easier if you gently pinch the two sides of the basket near the tab. The paint on the basket sometimes makes this difficult. In that case, move the tab back and forth to free it).
- 2) Unfold the basket and push the bottom down.
- 3) Slide the two R-shaped hooks on the upper side of the basket to each side of the fastener (the flat side of the hooks must face the rack). Slide the two hooks over the lateral side of the rack. Attach the hooks with the screws and nuts provided.
- 4) Attach the basket to the slanted rack supports using the U-shaped hooks on the bottom. Fasten with the screws and nuts provided.
- 5) Alternative installation: If the side of the rack is too large in diameter for the R-shaped hooks, use only the nylon ties provided. Make a loop by sliding the pointed end into the opening of the other end (smooth side out), then tightening the loop (easier with flat nose pliers). Cut the end.

Be careful! Do not make a test loop, you will not be able to undo it! (Nylon ties are available at most hardware stores).

- 6) When you no longer need the basket, lift the bottom, fold the two narrow sides toward the middle and then fold the large side toward the rack. Lower the tab/hook to hold the basket closed.
